

PrimaLuna[®] ProLogue Three

- True dual mono design with two toroidal power transformers and choke regulation.
- Point-to-point wiring and premium parts including Alps Blue Velvet potentiometer, Solen and Swellong capacitors, and ceramic tube sockets.
- Tube rectification using TWO 5AR4 tubes, one for each channel. Designed with no negative feedback and no cathode followers for a vibrant midrange, creating a three-dimensional soundstage rarely encountered.
- Low noise achieved with DC heater supply and 11dB of gain. The power supply is perfectly de-coupled with an ultra-wideband, constant source impedance, and low corner frequency of over two octaves below the audio bandwidth (4Hz).

Optional ProLogue Phonostage can be added at any time.

- The ProLogue Three is non-inverting and has two pairs of outputs so you can easily bi-amp or add a powered subwoofer. Low output impedance compatible with nearly every tube or solid state power amp.
- Hand-rubbed, high gloss finish with black or silver faceplate and quick-release tube cage. Weighs a substantial 17.5 lbs.
